

**Listing of the Claims:**

1-20. (canceled)

21. (previously presented) A method of integrating into a multi-display system a monitor having screw holes at the rear of the monitor for screwing an engagement means to the monitor, the method comprising:

providing a display system having an arm with at least two support members for supporting at least two monitors, said engagement means being unsuitable for supporting the monitor on either of the two support members;

removing the engagement means from the monitor by unscrewing;

screwing a mounting bracket to the rear of the monitor using in the screw holes, said mounting bracket being compatible with at least one of the at least two support members; and

mounting the monitor to the arm with the at least one of the support members.
